

## Maintenance unit of a Dehumidifier

### DESCRIPTION

- The dehumidifier is made up of a refrigeration unit, which cools air by passing it over a tube containing cold refrigerant. The air being cooled contains water which, condenses and is recovered.
- The components are of industrial quality.
- The instruments found in the unit allow for the measurement and adjustment of various parameters.
- The unit is delivered complete with instrumentation and with a technical and instruction manual.

### SUGGESTED APPLICATIONS

Functioning and maintenance of a dehumidifier.  
Functioning of a refrigeration system and an air / water exchanger  
Identification and function of the different elements  
Diagnosis of failures.
