

## Group filtration

### DESCRIPTION

- The group of filtration is an essential tool to any activity of maintenance on the industrial hydraulic installations
- This group is delivered complete with technical handbook.
- Material of the industrial type.
- Compatible with any types of hydraulic installations
- Teaching concerned: Maintenance of the industrial systems and complementary mentions in hydraulics

### TEACHING APPLICATIONS \*

- Depollution of the hydraulic oil tanks
- Filtration of the fillings and the oil supplements in the hydro-electric power stations

## Technical description:

### 1 unit made up of:

- 1 metal frame
- 1 group motor-driven pump 0,7kW, 20L/min, 5 bars maximum
- 1 body of filtration spin one
- 2 filter cartridge 10 microns
- 2 flexible devices of connection
- 2 car-sealing couplers
