

## Friction test unit

### DESCRIPTION

- The unit is delivered complete with instrumentation and with technical and instruction manuals.
- Designed and manufactured to industrial standards.
- Designed for quick and easy set-up.
- This unit is designed for various levels and fields of study.

### PEDAGOGIC APPLICATIONS

- Friction study under various set-ups.
- Demonstration of the ratio between the applied force and the normal force
- Comparison of the coefficients of friction resulting from the use of dried, rough and lubricated pulleys.
- Illustration of the importance of the surfaces in contact using materials that vary in composition and hardness
